

vehicle:
duration:
distance:

Where did you go last week?

Think of the day you traveled most and paint the route on the map.
Which type of vehicle did you use? How long was the trip and how much time did it take you?
Feel free use post-it's to note down those numbers.

What is your preferred way to get around the city?

What makes it better than other means of transportation?

Which are its disadvantages?

Write your notes on post-its and place them anywhere on the board.

If you agree with someone, copy (alt+click) one of the emojis dots below and put it on their statement.

Using the vehicle ...

... has replaced the bike I owned before.

... lets me have an impact on the city I live in.

... makes me feel flexible and free in the city.

... I want to try out also other sharing services.

... allows me to avoid using a car.

How do we define the focus of our project?

On the board you can find possible impacts of of our project.
Which of the statements seem most important to you?
Order the cards based on your preferences.

A) You have to go from Christianshavn to Klampenborg.

I go by car so that I am not exhausted when I arrive.

I take a bike with electric support that keeps me from sweating.

B) Think of what applies best to your daily routine.

I will meet friends and move around with them.

I need to buy some groceries and take them with me.

C) Arriving at work you leave the rented vehicle you came with.

I rented it long term so it is still there when I need it again.

I rented it for the trip only and will find another one later.

D) You are on your way from Rådhuspladsen to Amager Strand.

With less cars and riding a cargo bike or pedelec I would use the street.

Even when when sharing it with scooters I still prefer bike lanes.

E) It is starting to rain just as you want to leave by bike.

I wish the bike had a roof or a windshield to keep me dry.

I put my rain gear on and enjoy the bike's lightness.

F) You are using an electric vehicle that needs to be charged.

Vehicles that can be plugged into a charger are convenient.

I like removable batteries that can be swapped for full ones.

What does a vehicle have to do?

Have a look at the scenarios. Each of them has a choice of what you expect from a vehicle in a given situation. Choose one of the options and think about why you prefer it.

How does your perfect vehicle for Copenhagen look like?

What can it do? How many wheels does it have? Are there pedals?
There are no limits for your creativity.

You can use the elements on your board. Feel free to add descriptions,
drawings or other images, as well.
